

We market our products in many countries of the world. Again and again we and our partners in the field receive interesting reports from dairy farmers and scientists. We are happy to process this information to you and hope that you will find it helpful. Send us your suggestions – we count on them to help us give you a better product!

Many thanks, your KRAIBURG Team

ISSUE 39 - May 2016

RENOVATION OF ELEVATED CALF PENS IN SOUTH AFRICA

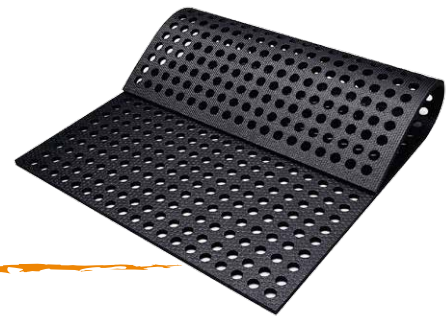

In South Africa small calves are often kept in elevated calf pens with a grid floor with no litter. An example shows how the comfort of these pens can easily be improved.

The floors of these pens consist mostly of plastic, simple metal grids or of wood and are often:

- too slippery
- sharp-edged ▶ risk of injury
- too cold for the calves

A good way to solve this problem: the KRAIBURG CaBoMat

- animal-friendly flooring for elevated calf pens
- improves slip-resistance and reduces risk of injury
- heat insulating

Before renovation

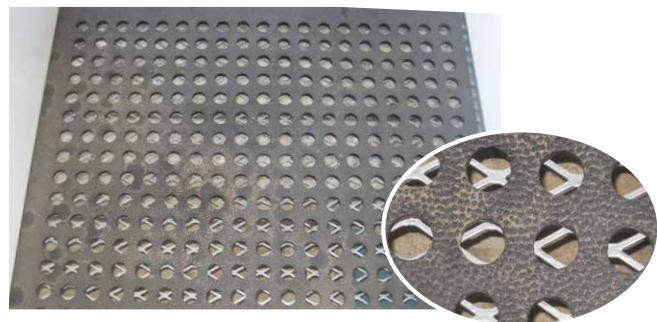

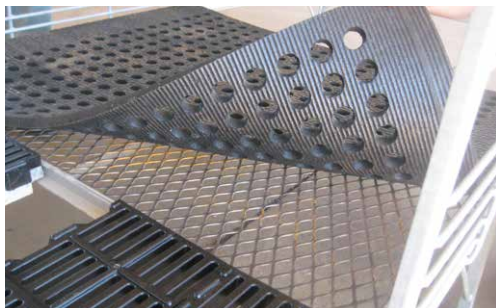

floor covered with metal grid

After renovation

floor covered with CaBoMat

The mat is laid onto the grates with no fixation:
