

We market our products in Europe, the USA und many other countries around the world. The knowledge we gain through this is compiled and given back to you in the form of helpful tips. Send us your suggestions - we count on them to help us give you a better product!

Thank you very much from your KRAIBURG research & development

SCRAPER ADJUSTMENT ON KURA P: ANNUAL CHECK

When initially installing KURA P on scrape alleys, either special scrapers for rubber covers are used or the scrapers present are adjusted, based on **KRAIBURG specifications for scraper manure removal** (available under www.kraiburg-agri.com).

The **annual check** is decisive for many years of reliable scraper function on KURA P, because even on rubber covers scraper parts wear out, i. e. edges become sharp from grinding.

example: scraper wear on steel parts after approx. 2 years

tip: turn scraper over, check for sharp edges and if necessary deburr them with an angle grinder
