

We market our products in many countries of the world. Again and again we and our partners in the field receive interesting reports from dairy farmers and scientists. We are happy to process this information to you and hope that you will find it helpful. Send us your suggestions – we count on them to help us give you a better product!

Many thanks, your KRAIBURG Team

ISSUE 38 - April 2016

RECOMMENDATIONS FOR THE CALVING PEN

Nature:

a cow separates herself from the herd for calving ▶ **single calving pens make sense**

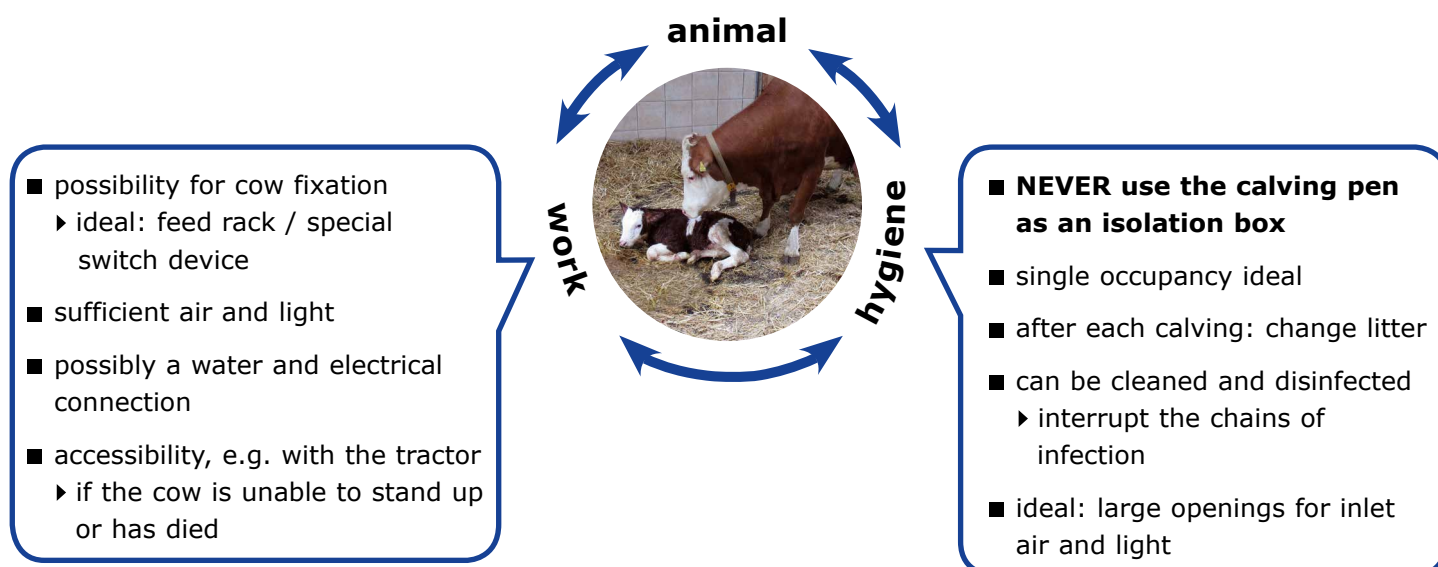

Advantages:

- can be well monitored
- good hygiene management
- undisturbed obstetrics

BUT: avoid the stress from changing housing!

- ▶ Pen should be beside the dry cow section
- ▶ contact to the accustomed herd members

Requirements on the calving pen:

- size: minimum 4 x 4 m
- sufficiently large sized waterer
- easy access to feed
- clean and dry
- slip-resistant and soft floor
 - ▶ should be easy and fast to clean

Example: KRAIBURG VITA

litter material is only for absorbing liquids and can be replaced after every calving

installed VITA with swivelling fixation rack on the Köllitsch experimental farm, Germany
